Trend-driven ad creatives: prompts and results

R2C.Ai (Research to Commercialization), IIIT Delhi · 9 sample ads, one per trend

How each ad is made

1. Trends	A crawler (Crawlee) collects AI/ML news and posts from many sources. Items are embedded with Gemini (gemini-embedding-001), clustered into stories, checked across platforms and ranked; 7 trends qualified and 2 near misses were kept.
2. Ad copy	Google Gemini (gemini-3.5-flash-lite) writes the copy for each trend as an ad for R2C.Ai aimed at researchers or industry: hook, headline, subline, three of R2C.Ai's real services, and a call to action. Rules in code reject hype words, invented features, clichés and over-long text, and send the brief back for repair.
3. Picture idea	A second Gemini pass acts as creative director: it replaces the picture idea with one bold visual metaphor linking the trend to the reader's opportunity.
4. Prompt	Code (not the model) assembles the image prompt shown on each page: style, subject, action, camera, lighting, R2C brand colour grade (navy #0A1F3C, royal blue #3B5DE7), composition, and a no-text instruction.
5. Image	The prompt is rendered by FLUX.2 Klein 9B (@cf/black-forest-labs/flux-2-klein-9b) on Cloudflare Workers AI.
6. Finished ad	Code lays out the R2C brand template on the picture: official logo, site description, headline (Fraunces), text and services (Inter), CTA button and footer. Text is typeset, not drawn by the image model, so it is always spelled correctly.

Models used

Image model	FLUX.2 Klein 9B (@cf/black-forest-labs/flux-2-klein-9b) on Cloudflare Workers AI
Copy and creative direction	Google Gemini (gemini-3.5-flash-lite)
Embeddings (trend clustering)	Google gemini-embedding-001
Layout and branding	Python (Pillow) brand template; fonts Fraunces and Inter (SIL OFL)

Formats

4:5	Instagram / Facebook feed (hook ads)
9:16	Instagram / Facebook Stories and Reels (bottom area left clear for the app's reply bar)
1:1	LinkedIn / Facebook feed (engagement ads)
1.91:1	LinkedIn / Facebook link ads (conversion ads)

Each following page shows the trend, the ad text, the exact prompt sent to the image model, and the finished ad.

Procedure: from trending AI topics to ready-to-post ads

Goal. Find what is trending in AI/ML right now, and turn each trend into a ready-to-post R2C.Ai ad for Instagram, Facebook and LinkedIn. Each ad uses the trend as a hook to show researchers or industry how R2C.Ai helps them.

Step 1: Collect signals. A crawler built on Crawlee for Python, with RSS/feed parsing, gathers recent AI/ML news, blog posts and community discussions from a list of sources. Each item is stored with its source, platform, date and text excerpt.

Step 2: Find the trends (Gate 1 and Gate 2).

- Every item is converted into a vector with Google's gemini-embedding-001 model.
- Items are grouped into stories with average-linkage clustering (similarity threshold 0.72). Clusters that are probably the same story are then checked by Gemini and merged.
- A story only counts as a trend if it appears on more than one platform.
- Each trend gets a score from its growth (weighted by platform) and its relevance to R2C.Ai. A brand-fit rule drops topics with R2C relevance below 40.
- Trends scoring 50 or more qualify, and those within 5 points are kept as near misses. In this run, 7 trends qualified and 2 near misses were kept, giving 9 trends.

Step 3: Write the ad copy.

- For each trend, Gemini (gemini-3.5-flash-lite) writes an ad brief on R2C.Ai's behalf, addressed to researchers or industry.
- Each brief has a hook, a headline, a subline naming R2C.Ai, three of R2C.Ai's real services, a call to action, a caption and hashtags.
- The services must be copied word for word from a fixed list of R2C.Ai's actual offerings, so an ad cannot promise a feature R2C.Ai doesn't have.
- Code checks every brief: word limits, no hype words, no invented facts, no visual clichés, and a different picture idea for each format. A brief that breaks a rule is sent back to Gemini with the list of errors, up to 3 times.

Step 4: Picture idea. A second Gemini pass acts as creative director. It replaces the first picture idea with a bolder visual metaphor that links the trend to the reader's opportunity. Examples are a paper crane lifting an engine block, or two people crossing a glass tightrope.

Step 5: Image prompt. Code, not the language model, assembles the final image prompt from fixed parts:

- style, subject and action;
- the surprising element;
- camera, lighting and mood;
- a colour grade in R2C.Ai's brand colours (navy #0A1F3C, royal blue #3B5DE7);
- composition rules for the chosen format;
- an instruction to draw no text.

Step 6: Image generation. The prompt is rendered by FLUX.2 Klein 9B on Cloudflare Workers AI. FLUX.2 Klein 4B, which is free, was used while testing the prompts.

Step 7: Finished ad. Code places the picture into an R2C.Ai brand template:

- the official logo and the site description ("License Research & Technology from Indian Institutes");
- the headline in Fraunces and the body text in Inter, the fonts used on the R2C.Ai website;
- a "How R2C.Ai helps you" list;
- a call-to-action button;
- a footer with r2c.iiitd.edu.in and "Incubated at IIIT Delhi".

The text is typeset by code rather than drawn by the image model. In testing, the image model spelled the ad text correctly in only about 1 of 25 attempts. Typesetting it means every word in the ad is spelled correctly.

Formats. 4:5 for the Instagram/Facebook feed, 9:16 for Stories and Reels, 1:1 for the LinkedIn/Facebook feed, and 1.91:1 for LinkedIn/Facebook link ads.

Output. One sample ad per trend, 9 in total. For each ad the following pages show the trend, the ad text, the exact prompt sent to the image model, and the finished ad.

Cost. Gemini and FLUX.2 Klein 4B run within free tiers. Klein 9B costs about $0.015 per image after the free daily allowance.

Current limitations.

- Some pictures are still weak or too abstract, and the image model sometimes adds a stray word inside the picture. Those ads need a re-render before they are posted.
- Facts quoted from the trends come from the crawled sources and should be checked by a person before an ad is published.

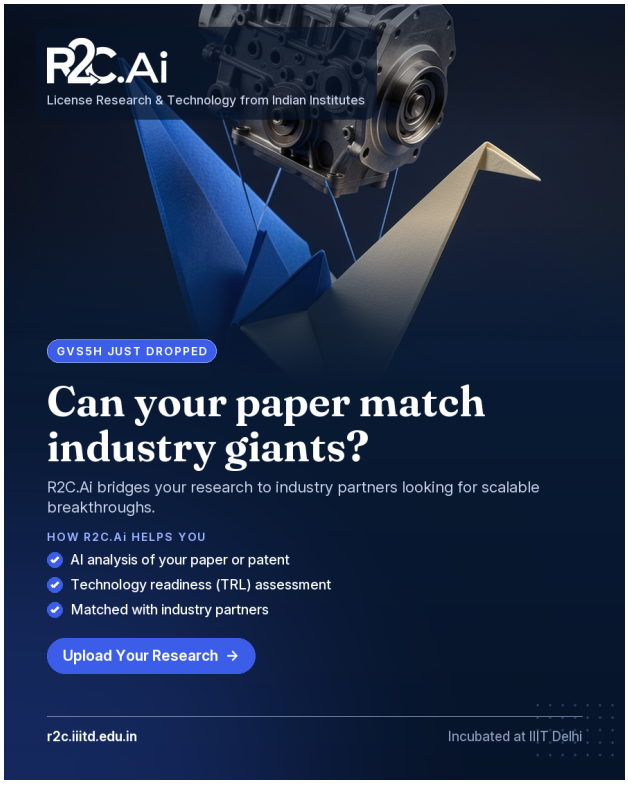

Ad 1 of 9 · GVS5H Harness Enables Qwen3.8-27B to Match Fable 5

Format	4:5 · Instagram & Facebook feed · hook ad
Audience	researchers
Image model	FLUX.2 Klein 9B (@cf/black-forest-labs/flux-2-klein-9b) on Cloudflare Workers AI

```
Premium key visual for a 2026 tech-brand ad
campaign. Editorial magazine-cover photograph,
hyper-real detail, bold graphic composition, rich
saturated colour, crisp focus. An intricate
geometric crane folded from heavy-stock textured
researcher manuscript paper, The paper crane holds
the heavy steel engine block aloft with invisible
tension, defying all physical expectations. An
impossible, gravity-defying weight disparity between
a fragile paper artifact and industrial heavy
machinery. Setting: A minimalist architectural space
with a matte finish and infinite depth. Camera:
Macro shot, 50mm macro lens, ultra-sharp focus on
the paper texture against a soft atmospheric
background. Lighting: Dramatically sculpted
side-lighting emphasizing the fibrous texture of the
paper contrasting with cold, brushed steel. Brand
colour grade: deep navy (#0A1F3C) shadows and royal
blue (#3B5DE7) light shape the whole scene, with
deep navy, royal blue, raw titanium, warm ivory as
vivid accent colours. Subject centred in the middle
band of the frame, whole and compact, with calm dark
space above and below it. Mood: surreal,
sophisticated, disruptive. Cinematic and high-end:
crisp detail, rich textures, dramatic depth, glossy
commercial finish, one clear subject, uncluttered
background. No text, letters, words, numbers,
handwriting, logos, watermarks, user-interface
elements, charts or labels anywhere in the image.

```
Premium key visual for a 2026 tech-brand ad
campaign. Vertical cinematic action still, dramatic
motion, frozen debris or motion blur, strong
backlight and atmosphere, film-grade colour. A
towering, impossibly thin column of aged vellum
paper morphing mid-air into highly polished liquid
metal, A colossal wave of heavy parchment breaks
cleanly against an invisible threshold, dissolving
into a stream of molten silver that pours directly
outward. The impossible mid-air transition of dry,
crackling paper turning into mirror-like liquid
mercury against a void. Setting: A cavernous,
ultra-minimalist concrete architectural space with
infinite vertical depth. Camera: Vertical 9:16
ultra-wide cinematic perspective, 35mm anamorphic
lens, hyper-detailed textures. Lighting: Deep royal
blue ambient wash pierced by a sharp, warm amber rim
light catching the metal edges. Brand colour grade:
deep navy (#0A1F3C) shadows and royal blue (#3B5DE7)
light shape the whole scene, with deep navy, royal
blue, aged parchment, polished chrome, warm amber as
vivid accent colours. Subject centred in the middle
band of the tall frame, whole and compact, with calm
dark space above and below it. Mood: Monumental,
transformative, hyper-premium. Cinematic and
high-end: crisp detail, rich textures, dramatic
depth, glossy commercial finish, one clear subject,
uncluttered background. No text, letters, words,
numbers, handwriting, logos, watermarks,
user-interface elements, charts or labels anywhere

PROMPT SENT TO THE IMAGE MODEL

```
Premium key visual for a 2026 tech-brand ad campaign. Candid documentary photograph of real people, natural window light, authentic expressions, modern lab or startup space, warm and optimistic. A diverse duo of a corporate engineering director and an academic researcher, looking down with intense awe at the impossibly intricate paper creation, The researcher gently blows a soft breath across the paper crane, causing delicate particles of golden light to shed off its wings like efficient data discharge. The surreal contrast of holding a colossal, complex architectural structure folded down into a weightless, glowing origami object in an ordinary room. Setting: A stark, brutalist concrete R&D atrium with towering glass windows at twilight. Camera: Wide dynamic-range shot, 35mm lens, sharp focus on the glowing paper texture against a moody architectural backdrop. Lighting: The primary light source emanates entirely from the glowing paper structure itself, casting amber and electric blue reflections onto their faces. Brand colour grade: deep navy (#0A1F3C) shadows and royal blue (#3B5DE7) light shape the whole scene, with electric blue, deep navy, burnt amber, concrete grey as vivid accent colours. Subject centred and compact in the middle of the wide frame, with calm dark space at the left and right edges. Mood: surreal, breathtaking, visionary, precise. Cinematic and high-end: crisp detail, rich textures, dramatic depth, glossy commercial finish, one clear subject, uncluttered background. No text, letters, words, numbers, handwriting, logos, watermarks, user-interface elements, charts or labels anywhere in the image.
